SUMMARY

Working in startups since 2011, I've developed a deep working knowledge of both the practical skills of product design as well as the team building and leadership skills needed to successfully guide a design team.

I've worked as an individual contributor building products and design systems, worked directly with founding leadership to define and execute product strategy, managed a team of designers working on cross platform enterprise software, as well as lead product teams within a larger product organization.

I am proficient in modern design software, prototyping and interaction tools and have working knowledge of web and mobile technologies and audio/video production tools.

EXPERIENCE

Collage.com • Sr. Designer

August 2017 - Present, Remote

As the Sr. Designer, I'm responsible for the user experience and visual design of all new features. My focus is split between the browser based design tool and the ecommerce platform, working with product managers and Jr. Designers on each project. I'm currently implementing a Sketch based design library, among other design best practices.

InVision • Product Manager

August 2016 - August 2017, Remote

I lead two internal product teams. One team focused on InVision's mobile app and mobile strategy and the other focused on the communication and collaboration. I worked with an engineering counterpart, the product team and company leadership to design, test, build and validate features and improvements to the product.

Zinc (formerly Cotap) • Director of Design

May 2013 - July 2016, San Francisco

As the first designer, I lead product direction and design implementation for Zinc (formerly Cotap), as well as managed a team of designers who worked on all aspects of the product and marketing. I also established and managed best practices for our team's design system.

Yammer (acquired by Microsoft) • Sr. Visual Designer

April 2012 - May 2013, San Francisco

As a designer on the product team I worked with product managers and design peers to build features for the front end web platform. I also focused on a new direction for the iOS and Android applications.

Posterous (acquired by Twitter) • Visual Designer

June 2011 - March 2012, San Francisco

I designed user facing themes and largely focused on Posterous Spaces web and mobile interfaces.

EDUCATION

Southern Adventist University

2006-2011

B.S. Interactive Media

B.S. Graphic Design
